

Why Biotivia

There is a vast difference in quality amongst various Resveratrol products. Biotivia is the only US company that harvests its own raw materials, extracts the Resveratrol using a patented low temperature vacuum system with an edible solvent in their own facility. They process the Resveratrol with an advanced dry fluid bed granulation system to insure absolutely consistent particle size and quality. They further utilize a bio-enhancement system, which they developed, to increase bio-availability of their finished Resveratrol products by a factor of at least 2 times that of pharmaceutical grade reference Resveratrol. Biotivia has over 18 years of experience in manufacturing rare botanicals and employ a staff of highly-qualified bio-chemists, botanists, pharmacists and process engineers. There is no other Resveratrol manufacturer that matches their quality, bio-activity and consistency.

Active Packaging System

Resveratrol is subject to oxidation, which renders the compound totally ineffective. To insure against this, Biotivia processes its products in an Oxygen-free environment, fills its bottles with nitrogen gas and uses a patented Oxygen scavenging packaging technology which no other supplement company uses. This Active Packaging System captures the free Oxygen in the bottle which enters when you take a capsule out. With this system we can guarantee that your supplement stays fully active for a minimum of 24 months.

Scientific Assessment

Biotivia is not only the world's best selling Resveratrol product line, it is also the first and often only choice of major universities, research facilities and medical schools. They buy their purified Resveratrol, in the form of Transmax, to conduct human studies and trials on Resveratrol's disease fighting and anti-aging properties. Biotivia's clients include prestigious organizations such as the Albert Einstein Medical School, Harvard University, the US National Institutes of Health and the Health Ministries of Canada, the UK and many other countries. There are more human trials underway using Transmax Resveratrol than all other competitors' products together.
